Gold Road Awarded “Best Emerging Company” at Diggers and Dealers

Gold Road Resources Limited (“Gold Road” or “the Company”) (ASX: GOR) has received the “Best Emerging Company” award at the 2011 Diggers and Dealers Forum.

Executive Chairman Ian Murray said the Company was delighted to receive the award and believes it is not only a reflection of the exceptional exploration success that Gold Road has achieved at its wholly-owned Yamarna Belt in Western Australia, but also recognition of the perseverance and hard work of Gold Road’s technical director Ziggy Lubieniecki, who has led exploration at Yamarna for a number of years.

“Since we commenced drilling in 2009 we have discovered five new high-grade gold prospects across what we believe is an entirely new gold region,” said Mr Murray.

“With grades of up to 1,000g/t gold and the discovery of parallel high-grade gold trends over a small proportion of our 5,000km² tenement area, we are extremely excited about the future and further proving up Yamarna as a new gold region.”

Gold Road is currently progressing a 150,000 metre drilling program across key targets in the region and expects to expand this program further in 2012.

About Gold Road Resources Limited

Gold Road Resources Limited (ASX: GOR) is a gold exploration company which owns tenements covering over 5,000 square kilometres of the Yamarna greenstone belt. The Yamarna Belt is located approximately 150km east of Laverton on the eastern edge of the Yilgarn Craton.

The Yamarna Belt, adjacent to the 500km long Yamarna shear zone, is a historically under-explored region that is highly prospective for gold mineralisation and hosts a number of significant new discoveries. It lies north of the recently discovered 5 million ounce Tropicana deposit owned jointly by AngloGold-Ashanti / Independence.

Gold Road is progressing two key gold trends, together with two recently discovered trends, on the Yamarna Belt:

- **Attila Trend**, which includes Attila, Alaric, Khan and Khan North Projects and extends for over 33 kilometres and hosts a significant JORC resource.
- **Central Bore Area** is a 6km² area east of the southern extent of the Attila Trend which has delivered five new discoveries in 15 months. Key projects in the Area include:
 - **Central Bore Project** - gold mineralisation over a strike length of 800 metres and from surface to a depth of 300 metres; assay results of up to 1,000g/t gold, remains open to the north, south and depth; hosts a significant JORC resource.
 - **Justinian Project** – 200 metres east of the Central Bore Project, 600 metres long, wider structure than Central Bore, with intercepts up to 7m @ 27g/t Au.
 - **Central Bore North** - 500 metres north of the Central Bore Project's high-grade Imperial Shoot.
 - **Byzantium Project** – 500 metres west of the Central Bore Project, 1km long, VMS style base metal prospect.
 - **Hann Project** – 2.4 kilometre west of the Central Bore Project, 4.3 kilometre long, three parallel gold anomalies.
- **Tobin Hill** – 5.5 kilometres southeast of the Central Bore, 1.5 kilometre gold anomaly.
- **Dorothy Hills** – 23 kilometres north-east of the Central Bore, two gold anomalies, 1.4 and 1.8 kilometre long.

NOTES:

The information in this report which relates to Exploration Results or Mineral Resources is based on information compiled by Ziggy Lubieniecki, the Technical Director of Gold Road Resources Limited, who is a Member of the Australasian Institute of Mining and Metallurgy and a Member of the Australian Institute of Geoscientists. Ziggy Lubieniecki has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration to qualify as a Competent Person as defined in the 2004 Edition of the "Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves". Ziggy Lubieniecki consents to the inclusion in the report of the matters based on this information in the form and context in which it appears.
